

## PIONEER SP OIL JAR

- The Pioneer SP Oil Jar has been designed with simplicity of operation and trouble free assembly in mind. The tool is used in coring, fishing, light drilling, reaming, side tracking, testing, and washover operations.
- Optimal circulation is maintained through the tool for effective flushing. Durable splines within the tool allow it to maintain maximum torque at all times regardless of the direction of any rotation.
- The operator can regulate the force of each impact with varying severity ranging from light to heavy. The interval between each impact, at its minimum, is only that required to slacken and hoist the string the length of the stroke.
- The ‘closed circuit’ hydraulic system, (thereby contaminant free) is filled with refined turbine quality oil, ensuring long life for wearing parts.

When ordering, please specify jar size and connection type.

**“QUALITY + DELIVERY IS OUR PRIORITY”**
